

TRIPLAN WALL SYSTEMS

TRIPLAN WALL SYSTEM

FEEL THE FREEDOM – FEEL THE CHANGE

TRIPLAN's relocatable wall system ensures great freedom and flexibility in the layout of any office or commercial construction.

TRIPLAN wall systems create elegant receptions, bright conference rooms, presentable management offices, discreet discussion areas, showrooms, atria, well-arranged meeting rooms and facilities.

THE DESIGN IS YOURS

The TRIPLAN wall system is known worldwide for its many options based on the same supporting structure.

During the last 40 years TRIPLAN International has developed various design solutions developed in close co-operation with architects from the global market.

Today TRIPLAN works with more than eight different product lines which all fit together. Each line offers a wide range of surface options: glass, wallpaper, wood and steel faced panels as well as a range of system colours.

Plenty of possibilities to create your own design. It's just up to you to choose the right one.

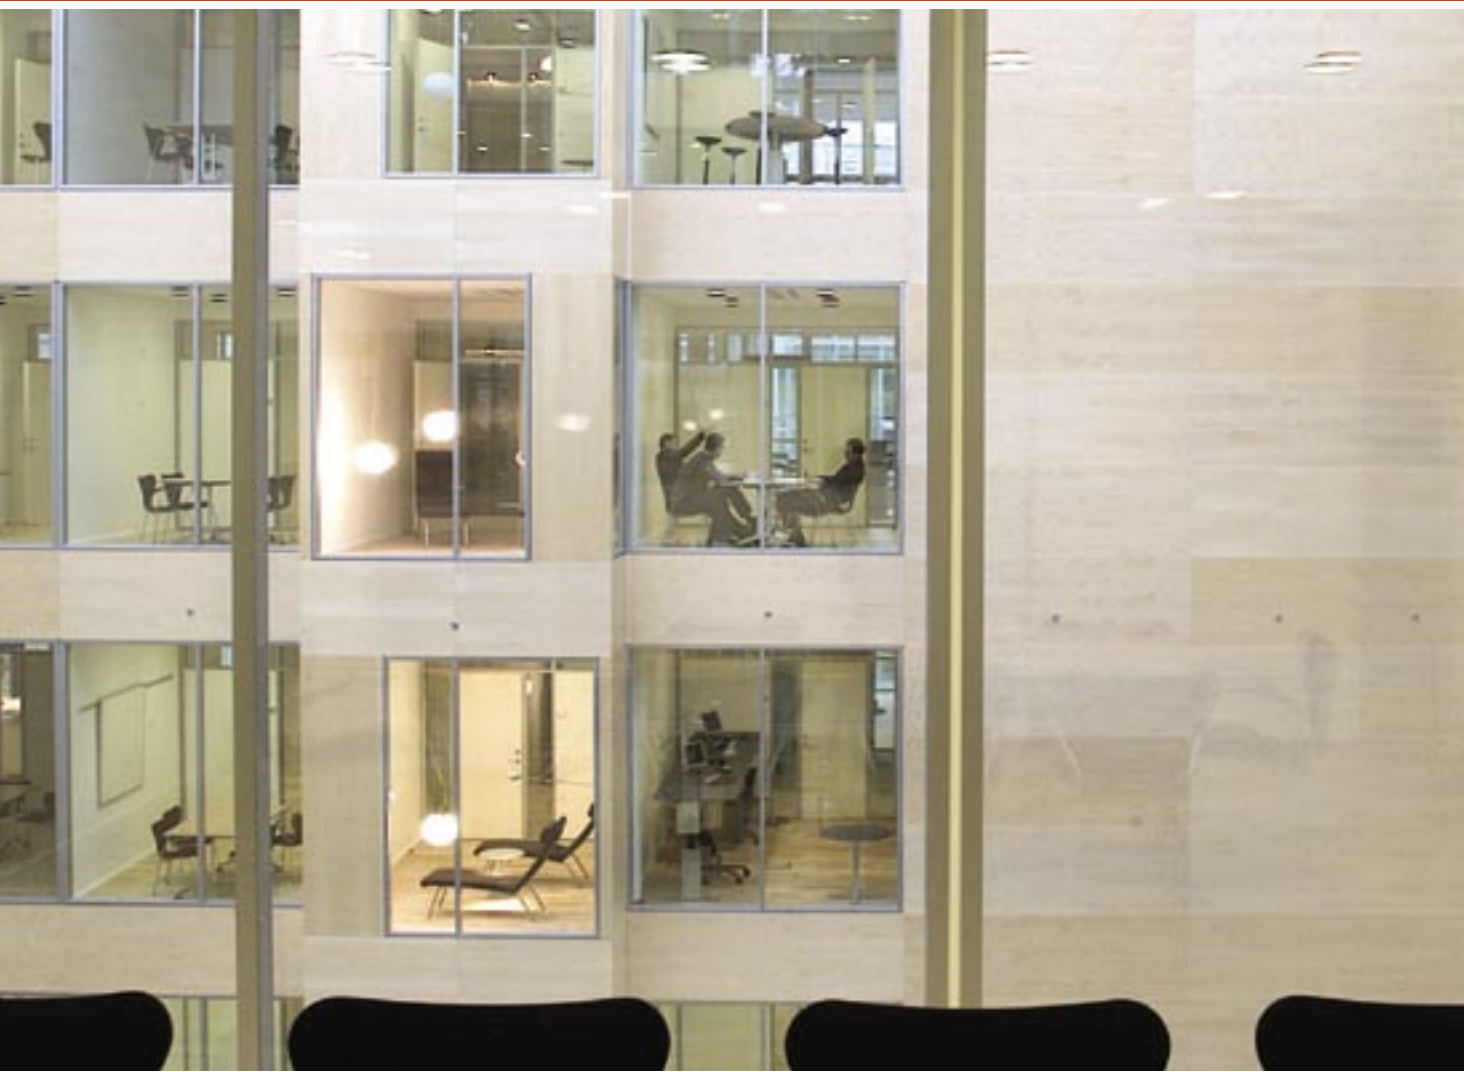

DESIGN YOUR SUCCESS

TRIPLAN was established in 1946 in Copenhagen, Denmark. The company is owned by three brothers and has for many years been one of the leaders in developing and producing wall systems.

The brothers' market knowledge, great engineering, ingenuity and persistent requirement to keep a high standard has resulted in a very flexible system based upon only one construction offering high stability, great working conditions that meet technical and regulatory requirements and amazing possibilities for satisfying the dynamic and demanding market.

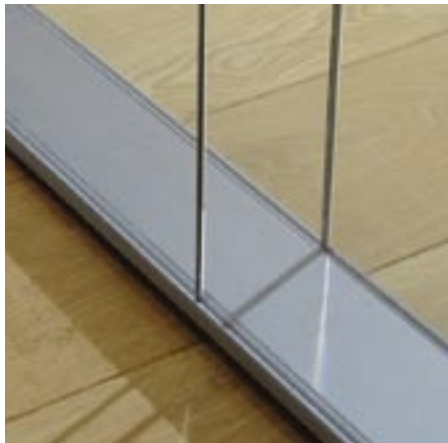

TRIPLAN develops and produces all product lines in house in order to fit the construction in terms of architecture, climate and culture.

Having built one of the biggest machine parks for light wall constructions as well as an impressive stock system, TRIPLAN also takes great advantage of fast delivery and competitive prices to offer.

FIRE AND HEAT RESISTANCE UP TO 90 MINUTES.

SOUND RESISTANCE UP TO 54 dB

TRIPLAN's system meets most European countries' building regulations concerning light wall construction systems' fire safety and sound reduction.

TRIPLAN meets the standards with even higher and wider modules than their competitors.

Since the company is operating all over the world the walls are continuously tested for fire and sound resistance in order to meet the individual requirements. A customer's request for a higher fire- or sound resistance level has never been a problem for TRIPLAN to fulfil.

TRIPLAN's standard solid wall has for instance the fire-certificate approved by the German DIN-norms of 90 minutes and for the standard glass wall TRIPLAN has achieved a fire certificate of 60 minutes.

TRIPLAN's standard* solid wall has passed sound reduction tests up to 49dB and the standard glass wall is test approved up to 48dB.

Using double steel frame the walls will improve the fire- and sound resistance. In that case a solid TRIPLAN wall will easily reach 90 minutes fire resistance and 54dB sound.

Due to the rigid construction the TRIPLAN wall system passed the German DIN-norm's strength test "Einbaubereich II" up to a height of 5,25 metres. The wall system passed by the use of 1200 mm wide modules which is an unusually fine achievement for such a light construction.

*Standard = Single steel frame with up to two layers of plasterboard

The Hang On-system is the latest innovation of TRIPLAN's product lines. The system has already been applied and specified for several projects. TRIPLAN has always been in close dialogue with the customer in order to secure the best understanding and result for all parties.

On the client's demand TRIPLAN developed a new hang-on system - the HO-system in co-operation with Architects Henning Larsen Architects. The hang-on system makes the wall appear without any visible separations of the modules.

Hence the system has already achieved a great success and has even opened up for new design possibilities and new trends. The unique hang-on system gives the users a feeling of floating glass panes - 1400 m² HO-system has just been successfully installed in an exclusive office building near the centre of Copenhagen.

TRIPLAN MAKES YOUR IDEAS POSSIBLE

Why?

Customer focus on - good service, on time supply and understanding customer requirements

Design flexibility - TRIPLAN offers no boundaries

TRIPLAN believes in partnering the right companies moving forward together

Setting standards that allow TRIPLAN to deliver real customer satisfaction
